4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **pmuacademia.com** for a **Agency / B2B service (national, Spanish-language, online-only: sales calls on Google Meet)** site, generated on October 28, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

55/100

SEO HEALTH SCORE

Critical Issues Found:

1. Main site is a client-rendered Lovable app: AI crawlers that skip JavaScript see 24-64 words per page instead of 300-600.
2. Only 4 URLs in the sitemap and no informational content, so the site can only rank for its own name.
3. The brand name collides with 'PMU' (Prince Mohammad Bin Fahd University) and 'The PMU Academy': brand searches return other organizations.
4. Zero third-party mentions found (no YouTube, Facebook page, LinkedIn, directories, or press) and sameAs lists only Instagram.
5. The English version (?lang=en) serves the same Spanish HTML with a canonical to the Spanish page, so hreflang 'en' is contradicted and English is effectively unindexable.

Quick Wins:

1. Add /book and /resultados internal links and /book to sitemap.xml; verify the site in Google Search Console and Bing Webmaster Tools and submit the sitemap.
2. Add FAQPage, Service + Offer ($297/mo) and Person (Adriano) JSON-LD to the homepage and /book.
3. Fix kit.pmuacademia.com <html lang='en'> to lang='es' and add a canonical tag.
4. Noindex agenda.pmuacademia.com (paid-traffic funnel) and make its /robots.txt and /sitemap.xml return real 404s instead of the app's HTML.
5. Add 'Página y anuncios por PMU Academia' footer credit linking to pmuacademia.com on every client site (with each client's OK).

2. Audit Categories

2.1 Technical SEO

Score: 60/100

What Works

- HTTPS on every host, behind Cloudflare; no redirect chains.
- robots.txt allows all crawlers (including OAI-SearchBot, Claude-SearchBot, PerplexityBot and Googlebot) and declares the sitemap.
- Self-referencing canonicals on /, /resultados, /book, /ejemplo.
- Each route ships a small pre-rendered fallback with its own title, description, canonical and Organization schema.
- /ejemplo (demo site) and the booking app page are correctly noindex.

Findings

Content is client-side rendered; raw HTML is thin High

Raw HTML word counts vs rendered: home 64 vs 597, /resultados 36 vs 472, /book 30 vs 615, /ejemplo 24 vs 298. Googlebot renders JavaScript, but GPTBot/OAI-SearchBot and PerplexityBot generally read raw HTML only, so the FAQ, pricing, founder story and results never reach them. The fallback H1 also differs from the rendered H1 on 3 pages.

Recommendation: Pre-render every public route to static HTML at build time (vite-plugin-prerender / react-snap style, or move the marketing pages to Cloudflare Pages like the client sites), so raw HTML equals what visitors see.

hreflang 'en' contradicted by canonical Medium

hreflang en points to https://pmuacademia.com/?lang=en, but that URL returns identical Spanish HTML whose canonical is https://pmuacademia.com/. English text only appears after JavaScript runs.

Recommendation: Either give English its own pre-rendered path (/en/) with its own canonical and reciprocal hreflang, or remove the hreflang tags until then.

Sitemap covers 4 URLs and omits /book Medium

sitemap.xml lists /, /resultados, /privacidad, /terminos. /book is indexable and canonical but missing. No sitemaps exist for kit.

Recommendation: Add /book (and every new content page) to the sitemap with real lastmod dates; submit in Search Console and Bing Webmaster Tools; turn on IndexNow via Cloudflare.

Subdomains return HTML 200 for robots.txt, sitemap.xml and llms.txt Medium

agenda.pmuacademia.com and app.pmuacademia.com answer every unknown path with the app shell (status 200, text/html). Crawlers read this as an invalid robots.txt and a soft-404 sitemap.

Recommendation: Serve a real robots.txt on each subdomain (agenda: Disallow all or noindex pages; app: Disallow private routes) and return 404 for unknown paths.

Ad funnel subdomain is indexable with no canonical Low

agenda.pmuacademia.com has no canonical and no robots meta, two H1s, and competes with the homepage for the same offer.

Recommendation: Add <meta name='robots' content='noindex'> to the agenda funnel; keep paid traffic pages out of the index.

No HSTS or security headers Low

No Strict-Transport-Security or Content-Security-Policy headers on any host.

Recommendation: Enable HSTS in Cloudflare (SSL/TLS > Edge Certificates).

2.2 Content Quality

Score: 40/100

What Works

- Strong first-hand experience signal: the founder story (built for his wife's studio, Brows By Lexxi) is on the homepage.
- /resultados publishes real client numbers (ad spend, leads, cost per lead, bookings): unique data nobody else has.
- Clear offer, price and guarantee in plain Spanish.

Findings

No informational content: the site can only rank for its own name Critical

Every indexable page is a sales or legal page. Spanish-language searches such as 'cómo conseguir clientas de micropigmentación', 'cuánto cobrar por cejas ombré en Estados Unidos' and 'anuncios de Facebook para micropigmentadoras' return Spain-focused or English pages; no one answers them for US-based Spanish-speaking artists.

Recommendation: Build a Spanish resource hub (/guias/) with pillar pages and supporting articles (see ACTION-PLAN.md content map).

No About page and no author entity High

Adriano appears only as a one-line signature. There is no About page, photo, credentials (years selling advertising to local businesses), or link to Brows By Lexxi.

Recommendation: Create /nosotros with Adriano and Lexxi's story, photos, experience and links; byline every article to Adriano with a Person entity.

Results page names clients and their ad spend Info

Client studio names and spend are public. Good for trust and citability, but needs each client's OK.

Recommendation: Confirm permission; add dates and a short methodology line so AI answers can quote it accurately.

2.3 On-Page SEO

Score: 62/100

What Works

- Titles 36-64 characters and unique; meta descriptions 105-160 characters and unique.
- Open Graph and Twitter cards on every page, with 1200x630 images.
- One H1 per page on the main site.

Findings

Titles target the brand, not what artists search Medium

Homepage title 'PMU Academia | Marketing para artistas de micropigmentación' is good; /book ('Agenda tu llamada · PMU Academia USA') and /resultados target no query.

Recommendation: Retitle /resultados as 'Cuánto cuesta conseguir clientas de micropigmentación con anuncios (datos reales)'.

Thin internal linking Medium

Raw-HTML nav links only to /resultados, /privacidad, /terminos. Homepage does not link to /book in raw HTML.

Recommendation: Add a real nav and footer (Inicio, Resultados, Guías, Nosotros, Agenda tu llamada) rendered in static HTML.

2.4 Schema / Structured Data

Score: 55/100

What Works

- Organization (legalName Academia Growth LLC, logo, email, phone, address locality, founder, knowsLanguage) and WebSite in raw HTML.

Findings

> **Missing Service/Offer, FAQPage and Person** Medium
>
> The homepage shows a priced service and an FAQ, but no Service, Offer or FAQPage markup. Founder is a bare name with no Person @id or sameAs.
>
> **Recommendation:** Add Service (provider = Organization, areaServed US, availableLanguage es) with Offer price 297 USD/month, FAQPage for the visible FAQ, and a Person entity for Adriano with sameAs.

> **sameAs lists only Instagram** Medium
>
> No Facebook page, YouTube, LinkedIn or TikTok profile in sameAs.
>
> **Recommendation:** Create/claim those profiles and add them to sameAs so search engines can reconcile the entity.

2.5 Performance (CWV)

Score: 75/100

What Works

- Lab LCP about 1.4-2.1 s and CLS 0 on the main site (mobile emulation, 4x CPU slowdown).

Findings

> **2.9 MB of JavaScript for a 4-page marketing site** Medium
>
> Main site loads ~2.9 MB of uncompressed JS; the agenda funnel loads ~4.1 MB JS + 0.9 MB CSS and took ~15 s to finish loading; kit has 1.35 s server response and 1.7 MB of images.
>
> **Recommendation:** Pre-rendering (Technical finding 1) removes most of this; compress kit images to WebP and size them for mobile.

2.6 AI Search Readiness

Score: 30/100

What Works

- All AI search crawlers are allowed in robots.txt.
- Homepage fallback paragraph is a clean, quotable definition of what PMU Academia is.

Findings

Brand entity is invisible and ambiguous High

Searches for 'PMU Academia' and site:pmuacademia.com returned Prince Mohammad Bin Fahd University (PMU) and The PMU Academy Essex; nothing from pmuacademia.com.

Recommendation: Use one consistent name everywhere ('PMU Academia USA' + 'Sistema Agenda Llena'), get indexed via Search Console/Bing, and build third-party mentions.

No off-site brand mentions High

No YouTube channel, Facebook page, LinkedIn, podcast, directory or press mention found. Third-party studies find brand mentions (YouTube strongest) correlate with AI citations far more than backlinks.

Recommendation: YouTube channel in Spanish, client-site footer credits, LinkedIn for Adriano, guest spots on Spanish PMU podcasts and Facebook groups.

No llms.txt (informational) Info

/llms.txt returns 404. Google says it does not help Search; it carries no weight in this score.

Recommendation: Optional: add a short llms.txt once the content hub exists. Do not prioritize it.

2.7 Images

Score: 80/100

What Works

- Main site images have alt text; OG images exist per page.

Findings

Funnel image missing alt; kit uses wrong page language Low

agenda 'artista.jpg' has no alt. kit.pmuacademia.com declares <html lang='en'> on a Spanish page.

> **Recommendation:** Add Spanish alt text; set lang='es' on kit.

---

3. Action Plan

Phase 1: Critical Fixes Week 1

- Verify pmuacademia.com in Google Search Console and Bing Webmaster Tools; submit sitemap; enable IndexNow in Cloudflare.
- Pre-render all public routes so raw HTML matches the rendered page.
- Add /book to sitemap; real nav + footer in static HTML.
- Fix hreflang (real /en/ path or remove), kit lang='es' + canonical, noindex agenda funnel, real robots.txt/404 on subdomains.
- Add Service+Offer, FAQPage and Person JSON-LD.

Phase 2: High-Impact Improvements Weeks 2-3

- Publish /nosotros (Adriano + Lexxi story, photos, experience).
- Rewrite /resultados as a dated, quotable data page.
- Create YouTube, Facebook page and LinkedIn; add to sameAs.
- Footer credit on every client site linking to pmuacademia.com.

Phase 3: Content & Authority Month 2

- Launch /guias/ hub: 3 pillar pages + 2 articles a week from the content map.
- Turn each article into a YouTube video/Short and embed it.
- Publish the 'costo por prospecto' data report and pitch it to Spanish PMU podcasts, suppliers and groups.

Phase 4: Monitoring & Iteration Ongoing

- Monthly /seo audit + /seo drift compare; refresh articles every 90 days.
- Monthly AI-answer spot checks in ChatGPT, Perplexity, Gemini and Google AI Mode for the target questions.
- Track AI referrals (chatgpt.com, perplexity.ai) in PostHog.

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)
